

## Project overview

The idea of the website is to be able to intake orders on an semi-autonomous basis. The Main part that needs to be designed is the Online order process. The main ordering/shopping page will have the options listed and have a process of inserting all the information which will be placed into an order management system. In addition to the initial options in the initial process, there will be a few “quick add” buttons. This will allow to ad a simple task to the cart without having to perform all of the details summarized in the process chain. Below is a list of desired goals

- Being able to manage the orders, change pricing, and being able to charge on a billing cycle, and well as one time charges is the main goal.
- Generating an order number and being able to attach files (signatures, photos, links, notes) within the OMS and being able to have customers print order labels would be great and considered secondary goal
- Adding the option of saving the customer’s information and creating a sign in portal
- Last goal would be regarding payments. Right now cash app is being used, and that is fine, however, if payment links can be sent, that would be great.

Right now the website is bare with wordpress and woocommerce installed. If another system is advised, it can be switched over. The entire idea is to have an order management system with a minimal amount of investment and financial commitment (if any needed) involved.

Finances are extremely limited due to the pandemic, and the lost of profit. We have been in the red for almost an entire year. For each phase more specific details can and will be provided.

The major element is the “form pages”.

This will be a form that appends the results to a table. Then submitted to the shopping cart. This is a table that shows the results from A form with the following elements (please keep in mind in order to keep this brief this is loosely describing the tape to DVD option):

Type of DVD: Movie, Home video

File Delivery: USB Flash drive, Online storage provider (customer provides the account), Online storage, we Host.

Comments

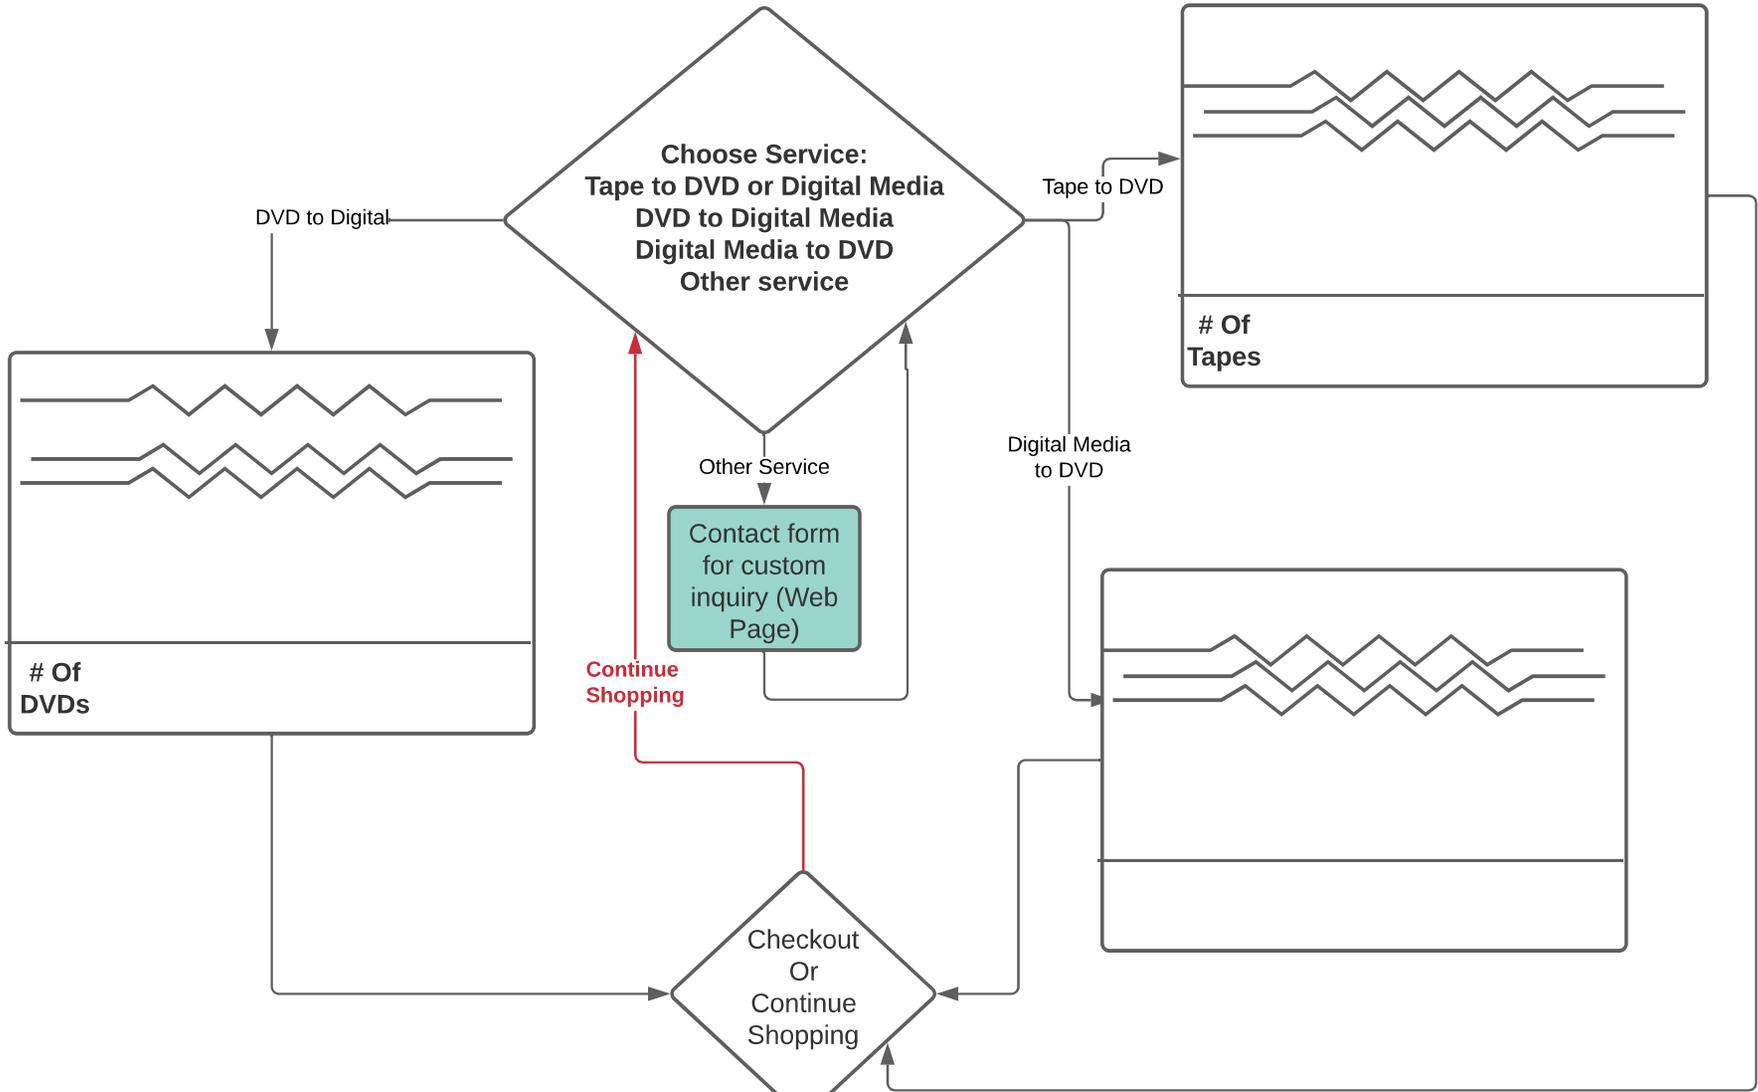

Movie title (optional)

Estimated duration: 0-30 minutes, 31 minutes to 60 minutes, over 60 minutes

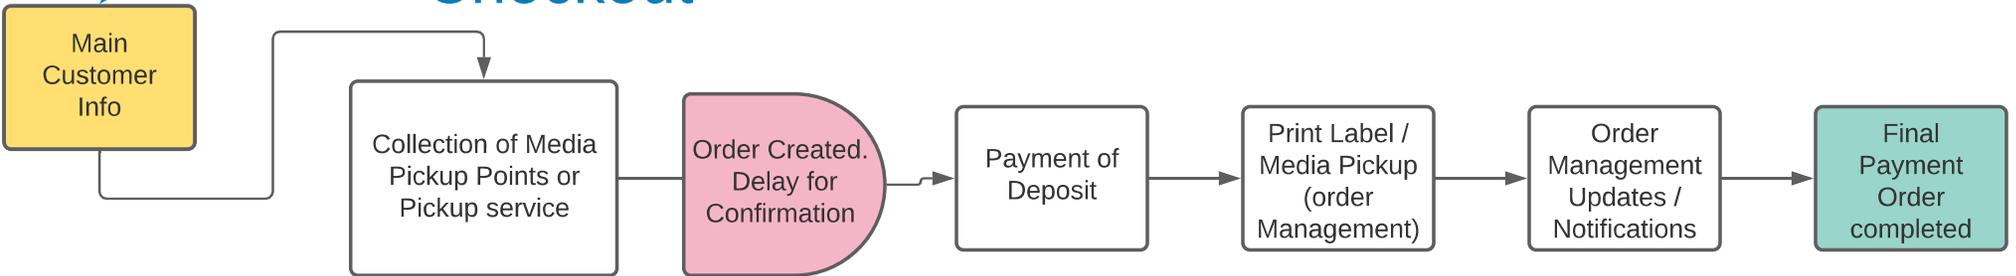

The client can continue to add another job, or just go to the checkout process which will submit the order an initiate the other phases one the business end. This includes verification, estimate cost and initiating the deposit.

The diagrams are what is in mind regarding the processes. Multiple programs/platforms suggested are welcome. Please let me know of cost of work, access and pre-requisites and any services that may need to be purchased along with an intro. and the word "FISH" in the reply. The workflow and processes are on the next page

Order process

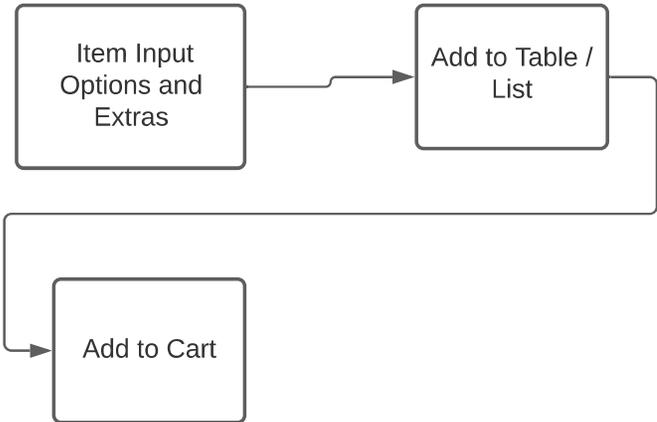

Checkout

# Of DVDs	Estimated Total
<input type="button" value="Add To Cart"/>	

Item Input process

Elements:

- Form- Title of movie (optional),
- Duration of Movie (dropdown),
- Type of media (camcorder, digital tape etc-  
Dropdown),
- Convert to DVD format (+/- QTY), USB Drive (QTY  
+/-)
- File (online storage from US, or provided by  
customer),
- All results to custom module (base price \$12 + extras  
= Total per submission)
